

Recorded flood levels at Bay & Central — expanded comparison

24 numeric reference levels, lowest to highest · same evidence as the chronological view · September 27, 2026

Sorted by the displayed reference value, not a definitive ranking of actual crests. Bounds and uncertain estimates may change the true order.

April 18: likely lawn-step level, possibly higher (owner recollection + gauge). October 30: reconstructed crest. Neither is a direct peak measurement.

August 27: approximate driveway-witness proxy, not a surveyed hard bound; actual crest missed. August 7: recession backcast. December 19: 08:12 bracket.

Whiskers show source ranges / sample spreads, not confidence intervals. Orange diamonds are mixed-vintage historical hindcasts, not as-issued forecast skill.

No numeric height to sort: Aug 2025 (Aug 21 tentative), Apr 17 2026, May 18 2026; dry checks: May 30 e01, May 31, Sep 25. All remain in the chronological view.

Source: expanded_events_data.json. Same values, sources and evidence classes; existing chronological and original all_anchors figures retained unchanged.
