

Recorded flood levels at Bay & Central

Historical comparison updated through September 27, 2026 · each flood episode shown separately

October 30: ~20.8" is a model-aided reconstruction from memory and post-peak photos, NOT a measured crest or lower bound.
John confirms both September morning floods were higher. December 19 shows an observation-time bracket; its peak was not observed.
Whiskers are reported brackets or declared reference windows, not statistical confidence intervals. August 7 includes a recession backcast.
Orange diamonds retain historical hindcasts, NOT as-issued forecasts. No new model comparison is claimed for the four added episodes.
Comparison cohort: nine prior reference entries + Sep 13 e02 + Sep 26 e01/e02 + Sep 27 e01. Sources and exact values: all_anchors_data.json.
